

PHP4Flicks Moviedatabase update

Skrevet d. 27/03, 2007 kl 14:20 af Martin Visninger: 317 [Læs/skriv kommentar \(0\)](#)

For those of you who don't know [php4flicks](#) , it is an open source application, to keep track of your movies, which gets its info from imdb.org. Prior to writing my own system, I used this application, and endorsed it on many forums. This seems to have caught up with me now

– I have received a few e-mails asking if I knew how to fix it, as it doesn't work anymore, due to the latest IMDB changes. The author of the application doesn't seem to be active these days, so I took the liberty to write an update for this application. Furthermore I'll continue to update it, whenever IMDB changes.

To "install" the update, simply replace the contents of the file `fetch_movie.php` (located in the `members/imdb` folder) with the update
